Dos & Don'ts

Connecting StreamCam

Do:

Connect direct to a **USB-C 3.1 port**

Don't:

Connect to a USB-A 2.0 port
It may or may not work, and you will be limited to 30 fps

Tip:

Search for a **USB-C female to USB-A 3.0 adaptor** if you do not have a USB-C port

USB-A 3.0 ports are indicated by the color **blue**

Setting up

Do:

Mount StreamCam properly in its holder

LANDSCAPE

LED light top left corner

Logi Logo on right side

PORTRAIT

LED light top right corner

Logi Logo on bottom

Don't:

Mount StreamCam inverted or upside down

Tip:

Follow the guidance inside the camera holder

This symbol shows the orientation to place the camera

Recording Full HD at 60 FPS

Do:

- ✓ Use a computer that meets the [system requirements](#)
- ✓ Close other apps that are running simultaneously
- ✓ Connect to power if using a laptop

Don't:

- ✗ Use a computer that's not powerful enough
- ✗ Run other intensive apps at the same time
- ✗ Use laptop battery power to record

Tip:

Adequate lighting greatly improves video quality

Place a direct light source behind the camera

Getting Started

Getting Started

Recommended Computer (for Full HD at 60 FPS)

- USB-C 3.1 port
- 2017 or later
- 7th gen Intel i5 or better
- Dedicated graphics card
- 8GB RAM

[Full System Specs Requirements](#)

Download Logitech Capture

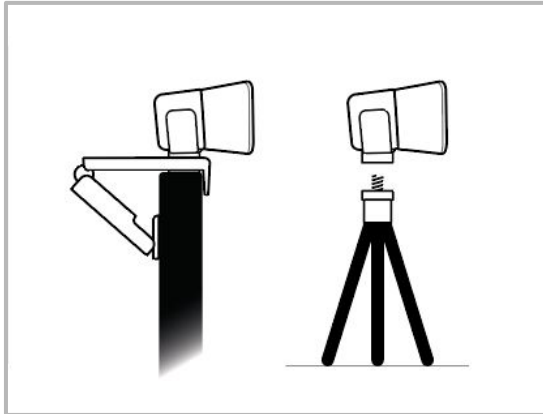

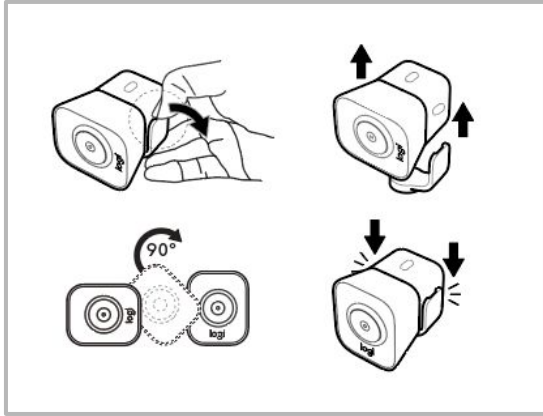

Available on logitech.com/Capture

Windows 10

macOS 10.14 and 10.15 **(BETA)**

Mount and Rotate StreamCam

Starting Logitech Capture

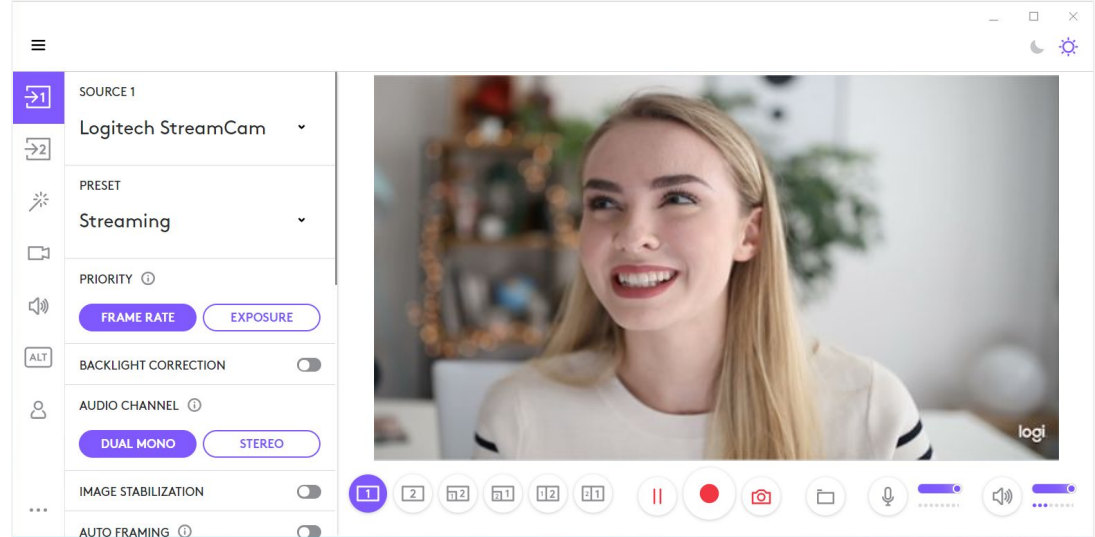

Select Logitech StreamCam for **Source 1**

Select a **Source 2**

- Logitech StreamCam #2
- Display or
- Window Capture

Logitech Capture makes it easy to record with multiple sources

Select a **Scene**

Accessing your Camera Settings

Image Adjustment settings are located in the video source tab

Auto Focus and White Balance settings are also located here

Resolution & Frames Per Second settings are located in the camera tab

Select your Audio Input if using an external microphone

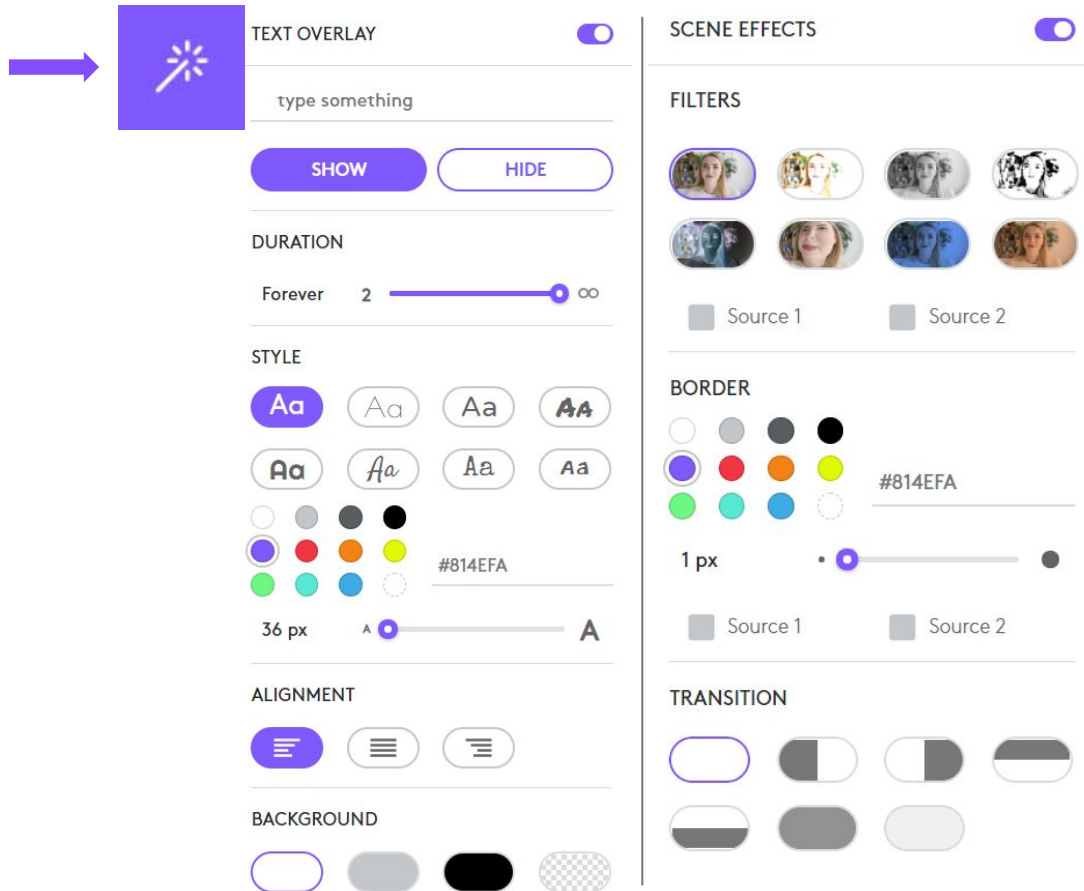

Exploring Effects

Navigate to the new **Effects Tab**

Apply **Live Text Overlays** and customize font and placement

Add **Scene Effects** like filters, borders and scene transitions to your sources

These effects can add personal touches to your video that make it more unique.

The screenshot displays the video editing interface with the **Effects Tab** selected, indicated by a purple arrow pointing to a purple square icon with a white starburst. The interface is divided into two main panels: **TEXT OVERLAY** and **SCENE EFFECTS**.

TEXT OVERLAY panel includes:

- A text input field with the placeholder "type something".
- SHOW** and **HIDE** buttons.
- DURATION** section with "Forever" and a slider set to "2" with an infinity symbol.
- STYLE** section with font style icons (Aa, Aa, Aa, AA, Aa, Aa, Aa, Aa), a color palette, a hex code "#814EFA", and a font size of "36 px" with a slider.
- ALIGNMENT** section with three alignment icons.
- BACKGROUND** section with four background options: white, gray, black, and a checkered pattern.

SCENE EFFECTS panel includes:

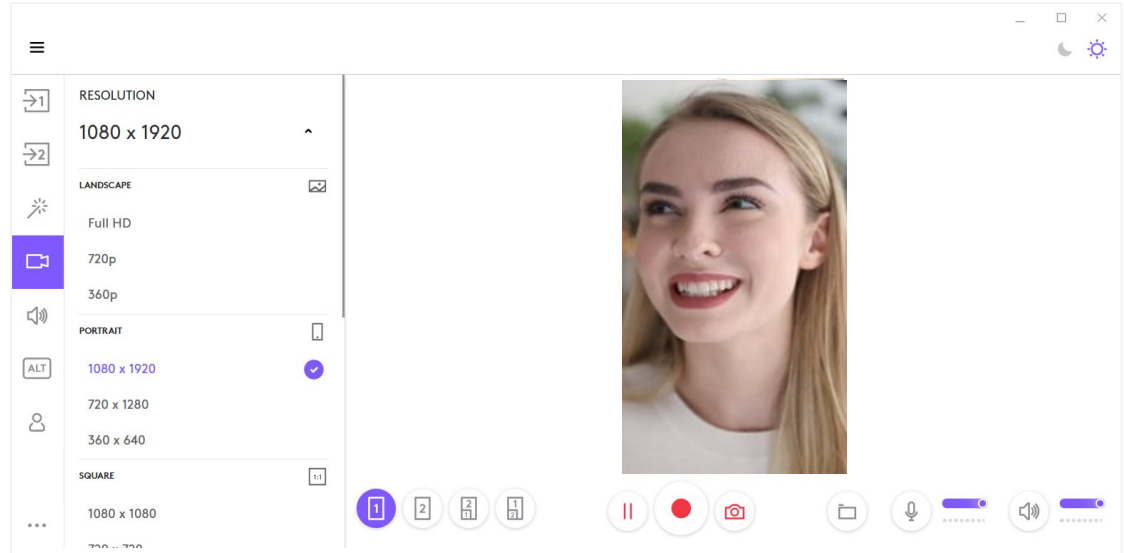

- FILTERS** section with two rows of filter thumbnails and checkboxes for "Source 1" and "Source 2".
- BORDER** section with a color palette, a hex code "#814EFA", and a "1 px" border width with a slider.
- TRANSITION** section with four transition icons and checkboxes for "Source 1" and "Source 2".

Vertical Video

Simply rotate StreamCam 90° to switch into **Portrait**

Access this mode for other sources in the resolution settings

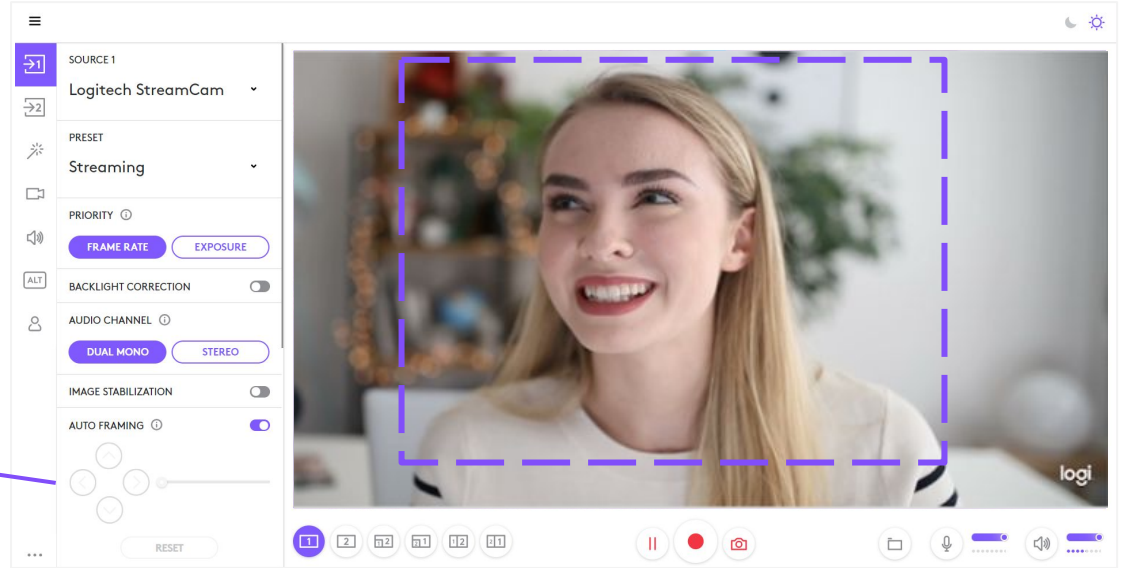

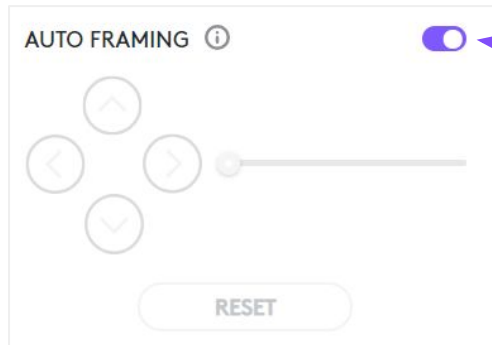

Vertical video is ideal for creating videos that will be viewed on mobile devices

Auto Framing

Activate **Auto Framing** by switching the toggle on

With facial tracking, Logitech Capture will automatically frame your face front and center

Manual controls for Zoom, Pan and Tilt will be disabled

Dark Mode

Choose to work in Dark Mode by clicking on the moon icon at the top right

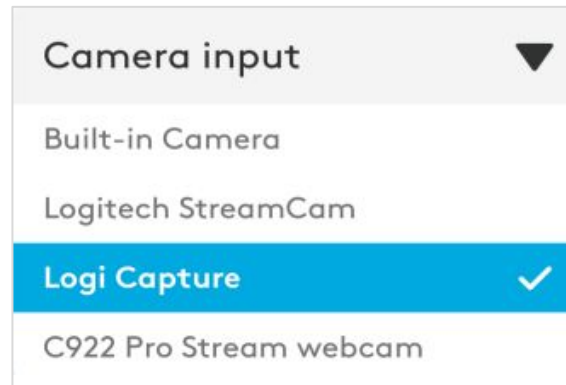

More Features

Virtual Camera

Windows only

Add Logitech Capture as a camera source to your favorite streaming platforms like YouTube, Facebook Live, or Twitch via OBS or XSplit

A white icon of the ALT key on a keyboard, enclosed in a rounded square, set against a purple background.

Keyboard Shortcuts enable you to trigger actions without the mouse

Profiles enable you to save your custom configurations

Log in to Logitech Capture with

- Facebook
- Google
- Creating a new Logi account

This feature enables you to backup your profiles to the cloud and unlock additional effects like

- font styles
- filters
- scene transitions

FAQs

How can I get the best video quality (1080p 60 fps)?

Achieving Full HD at 60 fps requires:

1. **A powerful computer**

We recommend a computer that's from 2017 or later, with at least a 7th gen Intel i5 CPU, dedicated graphics card and 8GB of RAM. If your computer does not meet these specs, drop the resolution and framerate to HD 720p at 30 fps.

2. **Closing all other apps**

Full HD at 60 fps is a demanding task and requires a significant amount of your CPU & GPU. Running other intensive apps simultaneously will constrain your computer and make it difficult to achieve this resolution and frame rate. For the best performance, close those other apps when recording.

3. **Connecting laptop to power**

Connecting your laptop to AC power will raise the CPU usage and will provide the best experience while recording Full HD at 60 fps video.

Other tips for improving video quality

- **Lighting:** inadequate lighting causes a drop in frame rate because the shutter operates slower to allow more light in. Using a direct light source on you or the subject you're recording can significantly improve the video quality. Using multiple lights will provide the best image.
- **Adjust your settings:** in Logitech Capture you can adjust the image settings to your desired preference for brightness, sharpness, contrast and saturation.

Why do I have a warning message when recording?

You are receiving a message because your video is at risk of lagging or dropping frames due to not enough processing power in your computer. We recommend to:

1. Close all other applications that you are running
2. Connect your laptop to its power source
3. Lower the resolution and FPS

Please review the [recommended computer specs](#) to make sure your computer is adequate for recording at higher resolutions and frame rates.

What if I do not have a USB-C port to connect StreamCam?

There are adaptors available that enable you to connect StreamCam's USB-C cable into your USB-A port.

These adaptors can be found by searching at your preferred retailer with the following keywords:
USB-C female to USB-A 3.0
